

# SeedGems Paper Planter - Template

For designing 1 to six panels

NOTES: Keep the document size what it is. It is set to the size of the die cut piece. Make sure bleed goes out to the bleed marks. Image needs to go to the glue area on the left of the design.  
Image/color needs to break at the die line so that when it gets assembled, the color breaks are where they should be. Leave the Die layer locked, so as not to accidentally place something on that layer, and so you can hide/un-hide when you need to.

Each panel is: 1-1/4" wide x 1-3/4" high

Any panel not used will be filled in with a botanical image of your seed choice.
